What is a PAMM Account?

Dan Rikkou - 2026-06-17 - [Comentários \(0\) - PAMM](#)

PAMM (Percentage Allocation Management Module) allows professional traders (Masters) to manage pooled investor funds in one account.

- Profits and losses are distributed proportionally by investor share.
- Masters earn performance fees, ensuring aligned incentives.
- Investors can monitor performance transparently and control their exposure.

Advantages: Passive investment, diversification, scalability.
